Introduction

I have a wide range of interests from design to back-end, from game development to 3d modeling, but my main thing is front-end.

Front-end:
Nowadays I mostly work with Angular, the NgRx state manager and gRPC, but I have work experience with React and I'm happy to learn any framework that comes in my way.
I pride myself on being able to build complex responsive layouts and to make sense of the messiest CSS. I'm performance oriented, from optimizing assets to utilizing javascript and framework specific best practices.

Back-end:
Have some experience with PHP and MYSQL, but most likely I won't be your next BE developer. Though I'd be happy to tip my toes into .NET / C# if it comes to it.

Design:
I'm proficient with Photoshop, designed quite a few smaller websites, webshops and logos. I have a love for 3d modeling, texturing and everything that comes with it. Mostly using Blender.

Other tools:
I'm a confident user of git commands, be it resolving conflicts, rebasing branches or cherry picking. I have some basic experience working with TeamCity and setting up build steps

Soft skills:
I have experience working remotely with a London based, multinational, multilingual team. So my english is generally considered good enough.
I try to keep on top of the industry by reading blogs, watching youtube and listening to podcasts.

Experience

2018 - 2025
Frontend web developer @ Prozenda / @ Ten
Budapest - Hungary
